SYSTEM PROPOSAL

Student Requirements and Document Tracking System

Platform: Web Application

Prepared by: Onofre Jr R, Vertudez

1. Introduction

Educational institutions handle a large number of student requirements such as Form 137, birth certificates, valid IDs, report cards, and other enrollment documents. Managing these requirements manually can make it difficult to determine which students have already submitted their documents and which requirements are still incomplete.

Currently, staff may rely on spreadsheets, paper records, or separate files to monitor student submissions. This can result in duplicated records, delayed follow-ups, and difficulty generating accurate reports. The proposed Student Requirements and Document Tracking System is a web-based application that will allow authorized staff to digitally monitor student requirements, update submission status, and generate reports.

The system will centralize student requirement records and provide a clearer workflow for checking submitted, pending, and missing documents. It will also support reminders and reporting to help authorized personnel manage requirements more efficiently.

2. Purpose of the Project

This proposal aims to present a web-based application that will streamline the monitoring of student requirements, provide organized records of submitted and missing documents, and help authorized staff efficiently manage student compliance. The system is intended to reduce manual checking, improve record accuracy, and make requirement monitoring more accessible and organized.

3. Objectives

3.1 General Objective

To design and develop a web-based system for efficiently tracking, managing, and monitoring student requirements.

3.2 Specific Objectives

• To provide authorized staff with secure login and role-based access.

• To create and manage student records.

• To record submitted and missing requirements.

• To allow staff to update the status of each requirement.

• To provide a searchable student requirements database.

• To generate reports of complete and incomplete requirements.

• To provide notifications or reminders for missing requirements.

• To ensure the system is secure, scalable, and easy to maintain.

4. Project Scope

4.1 In Scope

• User registration and login

• Role-based access

• Student record management

• Requirements checklist

• Document submission status

• Search and filtering

• Missing-requirement tracking

• Student status monitoring

• Dashboard and reports

• Reminder/notification feature

• Admin account management

4.2 Out of Scope

• Actual processing of school enrollment

• Online tuition or payment processing

• Automatic verification of government documents

• Integration with external school systems

• Physical document storage

• Mobile application

5. System Features / Functions

Module	Feature	Description
User Management	Registration & Login	Allows authorized users to create accounts and securely log in with role-based access.
User Management	Profile Management	Allows users to view and update their personal information.
Student Management	Student Records	Allows staff to add, update, search, and manage student information.
Requirements	Requirements Checklist	Displays the required documents for each student and their current status.
Requirements	Submission Status	Tracks submitted, pending, and missing requirements.
Search	Student Search & Filtering	Allows authorized staff to quickly find students and filter records by requirement status.
Reporting	Dashboard & Reports	Generates summaries of complete, incomplete, pending, and missing requirements.
Notifications	Requirement Reminders	Sends reminders or in-app notifications for incomplete requirements.
Administration	System Settings	Allows administrators to manage user roles, permissions, requirements, and system parameters.

6. Technology Stack

Layer	Technology / Tool	Purpose
Frontend (Web)	React.js / HTML, CSS, JavaScript	User interface for the web application
Backend / API	Node.js + Express	Business logic, authentication, and server-side processing
Database	MySQL	Stores student, user, and requirements records
Cloud / Hosting	Vercel / Render	Deployment and hosting environment
Version Control	Git + GitHub	Source code management
Project Management Tool	Trello / Notion	Task tracking and team collaboration
Other Tools	Figma / Postman	UI/UX design and API testing

7. Target Users

User Role	Description	Key Needs / Usage
Admin	System administrator managing overall operations	Full access to manage users, requirements, settings, and reports
Staff	Authorized school/admission personnel	Add and update student records, monitor requirements, and generate reports
Student	Student whose requirements are being monitored	View requirement status and identify missing or pending documents

8. Project Timeline / Work Plan

Phase	Activities	Estimated Duration
Planning & Requirements Gathering	Stakeholder interviews, requirements documentation, identify required student documents	1–2 weeks
System Design	UI/UX design, database design, architecture planning	2 weeks
Development	Frontend, backend, student records, requirements tracking, notifications, reports	4–5 weeks
Testing & QA	Unit testing, integration testing, user acceptance testing (UAT)	2 weeks
Deployment	System setup, sample data loading, user guide, deployment	1 week
Project Presentation	Presentation and demonstration of project	Ongoing / 3 months warranty

9. Summary

The Student Requirements and Document Tracking System is a web-based application designed to improve the management and monitoring of student requirements. The system addresses the difficulties of manually tracking documents such as Form 137, birth certificates, valid IDs, report cards, and other enrollment requirements.

It provides a centralized platform where authorized staff can manage student records and monitor the status of submitted, pending, and missing requirements. The system will include features such as user registration and login, role-based access, student record management, requirements checklists, submission status tracking, search and filtering, notifications or reminders, dashboards, and reports.

Administrators will be able to manage users, requirements, and system settings, while staff can update and monitor student records. Students can view their requirement status and identify missing or pending documents. Overall, the proposed system aims to reduce manual work, improve record organization and accuracy, simplify requirement monitoring, and make the process of managing student documents more efficient and accessible.
